FRONT RECEIVER HITCH (2WD & 4WD) These kits are ONLY used on full size UTVs

TOOLS REQUIRED
- 7/16" Wrench
- 7/16" Socket and ratchet

Towing capacity: 1200 lbs.  Tongue Load: 200 lbs.

As illustrated below, this kit consists of:
- Front Receiver Hitch Qty: 1
- Back Plate Qty: 1
- 3/8" x 1" Bolts Qty: 4
- 3/8" Keps Nuts Qty: 4

As illustrated below, this kit consists of:
- Front Receiver Hitch Qty: 1
- 5/16 x 1 3/8 U-Bolts Qty: 4
- 5/16" Nylock Nuts Qty: 8
- 5/16" Flat Washers Qty: 8

Procedure:
1. Place the four 3/8" x 1" bolts in the four holes in the receiver.
2. Place the back plate on the back side of the suspension mount with the bolt holes visible through the large opening in the suspension plate as shown in figure 1.
3. Place the receiver on the front suspension mount inserting the bolts through the large opening and into the holes in the back plate.
4. Place the receiver on the front suspension mount inserting the bolts through the large opening and into the holes in the back plate. Install the nuts and tighten as shown finished in figure 2 on page 2.

Procedure:
1. Place the hitch between the two vertical front frame rails.
2. Insert U-bolts and install a washer and nut on each end.
3. Tighten nuts evenly so that the same amount of threads show on each side.
Although not necessary, American LandMaster recommends removing the front bumper using a ½" socket and wrench. See figure 1.

Check the fit of the hitch between the two vertical front frame rails. Place the hitch between the two vertical front frame rails aligning the lower holes of the hitch with the slot in the front suspension bracket. The top set of holes should be just above the front suspension bracket. Insert U-bolts around the vertical frame rails and through the holes in the bracket. See figure 2 and NOTE below.

Tighten the nuts of the upper U-bolt nuts evenly with a ½" wrench/socket. The same amount of thread will show on each side. (torque to 12 ft*lbs). See figure 3.

Tighten the nuts of the lower U-Bolts (torque to 12 ft*lbs). If tightened evenly, there will be 3.5 less threads (3/16” length) exposed on the rear most leg of the lower u-bolt versus the forward leg. See figure 3.

Reinstall the bumper. (torque nuts to 17 ft*lbs).

As illustrated below, this kit consists of:

<table>
<thead>
<tr>
<th>Item</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front Receiver Hitch</td>
<td>1</td>
</tr>
<tr>
<td>5/16” x 1 3/8 U-Bolts</td>
<td>4</td>
</tr>
<tr>
<td>5/16” Nylock Nuts</td>
<td>8</td>
</tr>
<tr>
<td>5/16” Flat Washers</td>
<td>8</td>
</tr>
</tbody>
</table>

Tools Required:
- ½" wrench
- ½” socket
- ratchet

Even amount of threads

Approx. 3.5 less threads showing than front

Cut here if needed

On a small percentage of units, the chassis bumper mounting plate may need to have a small area removed to provide clearance to the front hitch. Grind and/or cut as necessary and then cover any exposed metal with exterior spray paint.
